Subject: Application for Java Developer Intern Position

Dear Hiring Team,

I am writing to apply for the Java Developer Intern position under your Fast Hiring Program. As a final-year B.Tech Computer Science student at GITAM University with a strong foundation in Core Java and hands-on backend development experience, I am confident I can contribute meaningfully to your team while growing as a Java developer.

During my academic projects, I have built and deployed real backend systems rather than just studying theory. I developed a Java Spring Boot recommendation engine that processed over 100,000 user records, achieving 87% recommendation accuracy and reducing API response latency by 35% through caching and optimization. I also built a Java-based GitHub repository visualization tool, integrating third-party APIs and applying object-oriented design patterns for scalable architecture. These projects gave me practical experience with REST APIs, MySQL, JDBC, and writing clean, maintainable code — directly aligned with the responsibilities outlined for this role.

Beyond Java development, I completed a Google Cloud security engineering internship where I configured IAM roles and firewall policies and worked with real-time threat detection tools. This experience sharpened my understanding of secure application design, debugging, and working within a structured engineering environment — skills that transfer directly to writing robust, production-ready backend code.

I am a quick learner who enjoys collaborating with teams, whether through hackathons I have organized or technical CTF competitions I have participated in. I am genuinely excited about the opportunity to work across your technology stacks, deepen my Java and backend development skills under experienced mentors, and contribute to real projects from day one.

Thank you for considering my application. I would welcome the opportunity to discuss how my skills and enthusiasm can add value to your team.

Sincerely,

Madhavi Nadindla
